Part B Reflection – Citation Mapping

Citation Verification & Citation Mapping Assignment | Tool used: ResearchRabbit

Reflection (150–200 words)

Running "Similar articles" from the paper's own reference set (seeded on 9 of the Amano-line citations, drawing from a pool of 1,186 candidates) showed something the spreadsheet couldn't: the paper's citations aren't scattered picks, they're one dense, self-referencing research community built around English-language dominance in science — Amano's 2013, 2016, 2021, and 2025 papers all cite and cluster around each other directly. The map also surfaced genuinely new, on-topic papers absent from the original reference list. The most valuable find is Liang et al. (2023), showing GPT detectors are biased against non-native English writers — a direct, citable extension of the review's core equity argument that I'd missed. Kobak et al. (2024) and Steigerwald et al. (2022), on detecting LLM-assisted writing and on machine-translation tools for multilingual publishing, are also strong fits. Others — Haddaway (2015), Hanauer (2019), Nuñez & Amano (2021), and Konno et al. (2020) — reinforce the language-barrier argument from angles (grey literature, second-language writing injustice, search bias) the paper doesn't currently cite.

New Papers Found & Screening Notes

- Liang et al. (2023) – GPT detectors are biased against non-native English writers *(Patterns)* — strong add.
- Kobak et al. (2024) – Delving into ChatGPT/LLM-assisted writing through excess vocabulary *(Science Advances / arXiv)* — strong add.
- Steigerwald et al. (2022) – Overcoming Language Barriers in Academia: Machine Translation Tools *(BioScience)* — strong add.
- Ramírez-Castañeda (2020) – Disadvantages in publishing caused by English dominance: Colombian researchers *(PLOS ONE)* — relevant.
- Nuñez & Amano (2021) – Monolingual searches bias global literature reviews *(Nature Ecology & Evolution)* — relevant.
- Konno et al. (2020) – Ignoring non-English studies may bias ecological meta-analyses *(Ecology and Evolution)* — relevant.
- Haddaway & Bayliss (2015) – Shades of grey: grey literature in reviews *(Biological Conservation)* — relevant, adjacent topic.
- Hanauer et al. (2019) – Linguistic injustice in research writing, Taiwanese/Mexican researchers *(Written Communication)* — relevant.
- Lynch et al. (2021) – Linguistic diversity gaps in intergovernmental ecosystem assessments *(One Earth)* — relevant, narrower scope.
- Singh et al. (2020/2021) – Journal coverage of Web of Science, Scopus, Dimensions – needs a closer read to confirm fit.

• Politzer-Ahles et al. (2020) – Preliminary evidence of linguistic bias in academic reviewing – relevant.

• Amano & Sutherland (2013), Amano et al. (2021, "Ten tips"), Clavero (2010), Wilson et al. (2016), Team (2014, R software) – background/tooling citations, lower priority.
